

# ROCKFALLS

**ROCKWATCH<sup>®</sup>**  
**ROBOT**

## EARLY WARNING OF ROCKFALLS

### How does it work?

- Rock movement often starts long before a rockfall occurs but this movement is usually too small to be seen.
- The RockWatch Robot can measure these very small movements.
- The Robot then warns stope workers of possible rockfalls through green, amber and red flashing lights.

### Key features

- Accurate to better than 0.5mm
- Robust and water resistant
- Lightweight and portable
- Quick and easy to install
- Reinstall as often as required
- Stopping widths up to 3.5m
- Tamper proof
